

Appendix E9. Population Distribution 60+

If we assume an initial population of 100,000,000 in the microsimulation, the population older than 60 years old is growing from ~ 25,000,000 to ~29,000,000 in Finland (Figure 1), from ~ 21,000,000 to ~ 25,000,000 in Lithuania (Figure 2), from ~ 22,000,000 to ~30,000,000 in the Netherlands (Figure 3) and from ~ 23,000,000 to ~ 30,000,000 in the UK (Figure 4), which is in line with data from the World Bank (Figure 5).
